

INFORMATION COMMUNICATION TECHNOLOGY

A key aim of ICT at St Michael's is to ensure the children are competent and confident in using technology to support and enhance their learning. Interactive Whiteboards are utilised in all classrooms in numerous applications. The staff of St Michael's has used Interactive Whiteboards for several years and has seen real benefits in using this technology. The Interactive Whiteboards do make a noticeable difference to student engagement and the achievement of teaching and learning outcomes.

A computer Laboratory has been established in the Library Resource Centre in addition to a bank of desktop computers in the central area of each block. Laptops and Netbooks are also available in each classroom for small group work, integrating Information Communication Technology into all aspects of the curriculum. The recent acquisition of iPads for individual and group use, has added a new dimension to the students' technological experiences.
